Food & Beverage Technology Club

Belgian Technologies for the Food & Beverage Industry
Dear Executive,

Delicious chocolates, creamy waffles, tasteful beers,.. good food makes the fame of Belgium.

The Food & Beverage Technology Club is a network of 30+ experienced Belgian companies which provide technology, products and services to the food processing industry.

The main objective of the Club is to promote Belgian solutions globally (national & international).

What are the future trends: Added-value for the customer.

Millennials: This generation is different in many ways from their predecessors, especially when it comes to food. They want healthy. They want authentic. And they want it right now.

Millennials are challenging the food industry to keep up with their demands, from clean labels and transparency to shopping online and healthy snacks. And as the Baby Boomer generation shrinks, it’s in the food industry’s best interest to leverage transparency, technology, and convenience to appeal to a fast-growing generation.

Our tagline: Close to the industry. Committed for growth

Our mission: we are dedicated to spurring their success and forward progress.
